

How a Global Tech Leader Streamlined Asset Management with ThreatAware

A leading UK-based technology company with a global presence, spanning Japan, Canada, Australia and France, faced the challenge of managing a widespread and dynamic IT estate. This included the critical task of maintaining a vast array of BYOD's (Bring Your Own Device) essential to their operations. Before implementing ThreatAware, spreadsheets were relied on to manage asset inventory. An approach that was not only time-consuming but susceptible to inaccuracies.

Challenge

This reliance on manual spreadsheet updates significantly hindered the ability to maintain visibility across their estate. Manually updating and reconciling spreadsheets consumed considerable time and resources, but also distracted from strategic priorities. In addition, the complexity and inefficiency of deploying and managing new tools across multiple global locations further exacerbated operational challenges.

Impact

After ThreatAware was implemented, the company saw substantial improvements in asset management and overall cybersecurity posture. With the platform's real-time data, it drastically reduced the time required to manage and update asset inventories. With a streamlined process in place, the team was able to shift their focus from manual data entry and prioritise strategic initiatives. They now benefit from complete visibility of their entire IT estate, accessible from a single, centralised screen.

With a seamless integration process, the company was now able to gain full visibility of its existing systems and reduce cyber vulnerabilities from the very start. Real-time updates ensured the data used for decision-making was always current and accurate. Finally, the reliance on spreadsheets was eliminated, reducing the risk of human error and improving the accuracy of the asset inventory.

"ThreatAware's simplicity and immediate visibility were game-changers for us."

"We went from manual spreadsheets to real-time updates in just 20 minutes. ThreatAware drastically cut-down our time on asset management, letting us focus on strategy."

"With ThreatAware, outdated data is a thing of the past. We now have complete visibility."

Security Engineer
Leading Technology Company

Key Benefits

Time Savings

The ThreatAware platform drastically reduced the time required to manage and update asset inventories. The streamlined process allowed the security team to focus on more strategic initiatives rather than manual data entry.

Real-time Visibility

With ThreatAware, they now enjoy complete visibility over their entire IT estate. The platform provides real-time updates, ensuring the data used for decision-making is always current and accurate.

Ease of Use

The team was impressed with the straightforward setup, which required no extensive deployment processes. It was both easy to install and integrate into their existing systems.

Elimination of Spreadsheets

The reliance on spreadsheets was eliminated, reducing the risk of human error and improving the accuracy of the asset inventory.

Conclusion

ThreatAware has revolutionised asset management for the leading technology company, providing a reliable and efficient solution that saves time, enhances visibility, and ensures the use of up-to-date data. By transitioning from manual spreadsheets to automated real-time data, they can now manage its global IT estate with greater confidence and accuracy.
